PROFILE

I am an undergraduate at SLIIT specializing in Software Engineering, with knowledge in software development, Artificial Intelligence, systems engineering, networking, and cloud technologies. Passionate about building innovative and scalable software solutions, I seek hands-on experience through projects and internships to develop practical skills and build a successful career in software engineering.

PROJECTS

SUZIE AI - Global Intelligence Operating System

- An advanced intelligence operating system that continuously monitors global events, supply chains, geopolitical developments, construction risks, fuel markets, and economic disruptions. Using AI-powered forecasting, memory-driven personalization, and real-time intelligence analysis, SUZIE transforms complex world events into actionable strategic insights through executive briefings, scenario simulations, crisis DNA analysis, and predictive risk assessments.

Sentra AI - Live GTM Intelligence OS

- Developed an AI-powered interview platform that automates the end-to-end interview process. Admins can create interviews, add customized questions, and generate unique PIN codes for candidates. Candidates can log in using the PIN, upload their CV, and attend AI-driven interviews with personalized questions generated based on their resume. The system supports multilingual interviews, AI-based answer evaluation, voice interaction using ElevenLabs, secure authentication, real-time interview tracking, and MongoDB-based data management for intelligent candidate assessment and reporting.

EDUCATION

SLIIT

- Specializing in SE

IPHS

- Quantity Surveying

ZIPS CAMPUS

- Advanced in Excel

HEADWAY COLLEGE

- Diploma in English

ZAHIRA COLLEGE

- Ordinary Level
- Advanced Level

SKILLS

- Object-Oriented Programming (OOP)
- Machine Learning
- Deep Learning
- Natural Language Processing (NLP)
- Artificial Intelligence
- Jakarta EE (Servlets, JSP, JSTL)
- Database Integration & Data Modeling

LANGUAGES

- English
- Tamil
- Sinhala

AAHA - AI-powered study companion

Cursor Buildathon

- Designed and built an AI-powered study companion for the Software Engineering module at SLIIT. The platform enables students and lecturers to upload lecture PDFs/slides, generate cheat sheets, flashcards, Tamil explanations, mock viva practice, and ElevenLabs voice lessons, while admins can manage content, review uploads, and monitor usage through role-based access. Gained experience in responsive UI development with Next.js/Tailwind, backend API integration with Node.js/Express, MongoDB-driven content workflows, AI service orchestration, and secure authentication with JWT.

Lumora – AI Interviewer

- Developed an AI-powered interview platform that automates the end-to-end interview process. Admins can create interviews, add customized questions, and generate unique PIN codes for candidates. Candidates can log in using the PIN, upload their CV, and attend AI-driven interviews with personalized questions generated based on their resume. The system supports multilingual interviews, AI-based answer evaluation, voice interaction using ElevenLabs, secure authentication, real-time interview tracking, and MongoDB-based data management for intelligent candidate assessment and reporting.

GestureMed – AI-Powered Sign-to-Speech Healthcare System

- Developed an AI-powered healthcare communication platform for deaf or mute patients using MediaPipe hand-tracking and WebAssembly-based real-time gesture detection. Integrated OpenAI API for multilingual medical message generation and urgency detection, and ElevenLabs API for natural voice output. Built a full-stack system with Vite, JavaScript, Express.js, Java, and MongoDB featuring secure authentication, emergency alerts, multilingual support (English, Tamil, Sinhala).

Greenhouse Automation System

Year 1 Semester 1

- Built a Greenhouse Automation System at SLIIT using Arduino and IoT sensors to monitor and control temperature, humidity, soil moisture, pH, and lighting. The system automates irrigation, ventilation, and allows remote monitoring through the Blynk app. Gained experience in IoT, embedded systems, sensor integration, and automation.

GoldenFolk - Restaurant management System

Year 2 Semester 2

RailLink – Train Scheduling & Booking System

Year 2 Semester 1

InkSpire BookStore – Java OOP Web Application

Year 1 Semester 2
